## VARIOGATE

You get what you pay

[www.variogate.com](http://www.variogate.com)

*Haagh Protection verkoopt en levert haar goederen uitsluitend onder toepasselijkheid van haar algemene leverings- en betalingsvoorwaarden, welke op uw verzoek kosteloos worden toegezonden.*

In the Netherlands last year, 93,000 work-related accidents occurred that were so severe that employees were unable to work for at least four days. Almost as many as in the previous two years, according to the Statistics Bureau of the Netherlands (CBS).

In 2019, more than 3 percent of all employees between the ages of 15 and 75 suffered physical or mental injury in the event of an accident in the workplace. Many incidents are the result of tripping, slipping, incorrect movement or heavy lifting. Largely this can be prevented with the right measures.

Almost half of the accidents took place in healthcare, industry and logistics. Relatively speaking, most accidents took place in logistics, construction, waste management and at water companies. The ICT and energy sectors have relatively the fewest incidents.

In addition to the anti-slip products sold by Haagh Protection, we have been offering our Variogate systems for many years to improve safe working at heights.

We have made an interesting comparison between Variogates and safety palletgate systems of the competition, which we encounter sometimes as a so-called cheaper alternative:

Our high quality Variogates (TÜV certified) are produced with S355 steel, thick-walled with high quality bonding materials, designed to optimally protect workers. Many of the joining methods and materials from other manufacturers are of low quality due to the use of parts with little welding, which makes it less strong. In addition, Haagh Protection uses thicker bolts and better connections at every point, which are less likely to loosen or damage upon impact.

The "sandbag pendulum test" is the best proof of this:  
<https://www.youtube.com/watch?v=RtBq5tbOz0c>.

The use between a Variogate and a standard safety pallet gate is actually best compared to a professional amateur and a DIY product. A professional will always buy a decent machine that will last a long time and the amateur a cheap drill, good enough to drill a hole once in a while. As you can understand, there is a difference in quality, which makes the price of a Variogate higher at first purchase but it saves costs in the long run.

Haagh Protection offers you, in any case:

- More than 35 years of experience
- TÜV certified products
- Easy to assemble devices
- Proven solutions in practice
- Fast delivery times and good service
- Customization if desired

Ultimately, the question is: how do you deal the best with your, and your employees safety, while working on a floor or mezzanine?

We think you already know the answer....
